Professional Summary

Junior Software Engineer with hands-on experience building and maintaining full-stack web applications in collaborative, fast-paced learning and project environments. Graduate of General Assembly's 420-hour Software Engineering Immersive program with a strong foundation in JavaScript, Python, and modern web frameworks. Known for being highly coachable and communicative, with experience applying feedback, working through technical challenges, and explaining technical concepts clearly in both team-based and user-facing environments. Brings an IT support background that reinforces strong collaboration, adaptability, and a user-focused approach to software development.

Core Skills & Technologies

Languages: JavaScript (ES6+), Java, HTML5, CSS3, SQL, NoSQL

Frontend Development: React.js, Responsive Web Design, Component-Based Architecture, State Management, UI Development

Backend Development: Node.js, Express.js, RESTful APIs, API Authentication, Server-Side Development, Error Handling

Databases: MongoDB, Database Design, Data Modeling, CRUD Operations

Security & Authentication: JWT Authentication, bcrypt Password Hashing, Environment Variables, Secure User Management

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Postman, VS Code, Linux/CLI

Software Development Practices: Object-Oriented Programming (OOP), Debugging, Version Control, Problem Solving

Interpersonal Skills: Clear Communication, Team Collaboration, Time Management, Adaptability

Technical Projects

Genshin Character Sheet – JavaScript, HTML, CSS

- Built a front-end web application consuming a third-party API to display structured character data
- Implemented AJAX requests, reusable UI components, and search functionality while iterating on usability through testing and feedback
- Collaborated through iterative testing and feedback to improve usability

Task Manager Application — React, Express, MongoDB, JWT, Docker

- Developed a full-stack task management application with a React frontend and Express.js REST API backend.
- Designed and implemented user authentication using JWT tokens and bcrypt password hashing to securely manage user accounts.
- Built RESTful API endpoints supporting user and task CRUD operations with MongoDB database integration.
- Implemented backend error handling and validation to improve application reliability and user experience.
- Containerized application services using Docker and Docker Compose while managing environment variables securely.

VirtualMall – React, JavaScript, Express, MongoDB

- Created a multi-store application with a full CRUD backend and dynamic frontend data rendering
- Practiced clear code organization and communication across multiple application layers

Professional Experience

IT Intern – Hub City Ford | Lafayette, LA | May 2021 – August 2021

- Provided day-to-day technical support by diagnosing and resolving hardware and software issues
- Communicated solutions clearly to non-technical users while independently supporting over 100 employees

Education

General Assembly – Software Engineering Immersive Program (420 Hours)

New York City, NY

South Louisiana Community College – Application Software Development (May 2026)
